

Consumer Confidence Report 2023

Spanish (Español)

Este informe contiene información muy importante sobre la calidad de su agua beber. Tradúscalo o hable con alguien que lo entienda bien.

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Perrydale Domestic Water Association pumped water from eight of our own wells during 2023. Two of these wells are drilled in fractured basalt formation West of the Willamette River. Three are drilled in the Troutdale Formation with some marine deposits. The other three are located north of Dallas in basalt formation at various depths.

Source water assessment and its availability

Perrydale Domestic Water Association continues to strive for excellence in sanitary conditions

throughout our system. We completed a Sanitary Survey in 2021 and were awarded an "Outstanding Performer" certificate from OHA for having no violations through a period of years. As of end of year 2023 PDWA still has no violations jeopardizing our certificate. Please continue to do your part in helping keep land clean of contaminants as to preserve our sources of clean drinking water.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity:

microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

Perrydale Domestic Water Association holds regular annual meeting for our Members on the second Tuesday of September. There are also monthly Board of Directors meetings held on the third Wednesday of every month. You may contact the office at (503) 835-7221 Monday thru Friday 8am to 1pm if you have any questions regarding attending.

Description of Water Treatment Process

Your water is treated by adsorption, accomplished by passing the water through a substance, such as activated carbon or alumina, to the water supply. Adsorbents attract contaminants by chemical and physical processes that cause them to "stick" to their surfaces for later disposal.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit www.epa.gov/watersense for more information.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Perrydale Domestic Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may

wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Additional Information for Arsenic

While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
Inorganic Contaminants								
Arsenic (ppb)	0	10	3.8	3.8	3.8	2023	No	Erosion of natural deposits; Runoff from orchards; Runoff from

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
								glass and electronics production wastes
Nitrate [measured as Nitrogen] (ppm)	10	10	.551	NA	.551	2023	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Synthetic organic contaminants including pesticides and herbicides								
2,4,5-TP (Silvex) (ppb)	50	50	0	NA	0	2023	No	Residue of banned herbicide
2,4-D (ppb)	70	70	0	NA	0	2023	No	Runoff from herbicide used on row crops
Alachlor (ppb)	0	2	0	NA	0	2023	No	Runoff from herbicide used on row crops
Atrazine (ppb)	3	3	0	NA	0	2023	No	Runoff from herbicide used on row crops
Benzo(a)pyrene (ppt)	0	200	0	NA	0	2023	No	Leaching from linings of water storage tanks and distribution lines
Carbofuran (ppb)	40	40	0	NA	0	2023	No	Leaching of soil fumigant used on rice and alfalfa
Chlordane (ppb)	0	2	0	NA	0	2023	No	Residue of banned termiticide
Dalapon (ppb)	200	200	0	NA	0	2023	No	Runoff from herbicide used on rights of way
Di (2-ethylhexyl) adipate (ppb)	400	400	0	NA	0	2023	No	Discharge from chemical factories
Di (2-ethylhexyl) phthalate (ppb)	0	6	0	NA	0	2023	No	Discharge from rubber and chemical factories
Dibromochloropropane (DBCP) (ppt)	0	200	0	NA	0	2023	No	Runoff/leaching from soil fumigant used on soybeans, cotton, pineapples, and orchards
Dinoseb (ppb)	7	7	0	NA	0	2023	No	Runoff from herbicide used on soybeans and vegetables
Diquat (ppb)	20	20	0	NA	0	2023	No	Runoff from herbicide use
Endothall (ppb)	100	100	0	NA	0	2023	No	Runoff from herbicide use

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
Endrin (ppb)	2	2	0	NA	0	2023	No	Residue of banned insecticide
Ethylene dibromide (ppt)	0	50	0	NA	0	2023	No	Discharge from petroleum refineries
Glyphosate (ppb)	700	700	0	NA	0	2023	No	Runoff from herbicide use
Heptachlor (ppt)	0	400	0	NA	0	2023	No	Residue of banned pesticide
Heptachlor epoxide (ppt)	0	200	0	NA	0	2023	No	Breakdown of heptachlor
Hexachlorobenzene (ppb)	0	1	0	NA	0	2023	No	Discharge from metal refineries and agricultural chemical factories
Hexachlorocyclopentadiene (ppb)	50	50	0	NA	0	2023	No	Discharge from chemical factories
Lindane (ppt)	200	200	0	NA	0	2023	No	Runoff/leaching from insecticide used on cattle, lumber, gardens
Methoxychlor (ppb)	40	40	0	NA	0	2023	No	Runoff/leaching from insecticide used on fruits, vegetables, alfalfa, livestock
Oxamyl [Vydate] (ppb)	200	200	0	NA	0	2023	No	Runoff/leaching from insecticide used on apples, potatoes and tomatoes
PCBs [Polychlorinated biphenyls] (ppt)	0	500	0	NA	0	2023	No	Runoff from landfills; Discharge of waste chemicals
Pentachlorophenol (ppb)	0	1	0	NA	0	2023	No	Discharge from wood preserving factories
Picloram (ppb)	500	500	0	NA	0	2023	No	Herbicide runoff
Simazine (ppb)	4	4	0	NA	0	2023	No	Herbicide runoff
Toxaphene (ppb)	0	3	0	NA	0	2023	No	Runoff/leaching from insecticide used on cotton and cattle
Volatile Organic Contaminants								
1,1,1-Trichloroethane (ppb)	200	200	0	NA	0	2023	No	Discharge from metal degreasing sites and other factories

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
1,1,2-Trichloroethane (ppb)	3	5	0	NA	0	2023	No	Discharge from industrial chemical factories
1,1-Dichloroethylene (ppb)	7	7	0	NA	0	2023	No	Discharge from industrial chemical factories
1,2,4-Trichlorobenzene (ppb)	70	70	0	NA	0	2023	No	Discharge from textile-finishing factories
1,2-Dichloroethane (ppb)	0	5	0	NA	0	2023	No	Discharge from industrial chemical factories
1,2-Dichloropropane (ppb)	0	5	0	NA	0	2023	No	Discharge from industrial chemical factories
Benzene (ppb)	0	5	0	NA	0	2023	No	Discharge from factories; Leaching from gas storage tanks and landfills
Carbon Tetrachloride (ppb)	0	5	0	NA	0	2023	No	Discharge from chemical plants and other industrial activities
Chlorobenzene (monochlorobenzene) (ppb)	100	100	0	NA	0	2023	No	Discharge from chemical and agricultural chemical factories
Dichloromethane (ppb)	0	5	0	NA	0	2023	No	Discharge from pharmaceutical and chemical factories
Ethylbenzene (ppb)	700	700	0	NA	0	2023	No	Discharge from petroleum refineries
Styrene (ppb)	100	100	0	NA	0	2023	No	Discharge from rubber and plastic factories; Leaching from landfills
Tetrachloroethylene (ppb)	0	5	0	NA	0	2023	No	Discharge from factories and dry cleaners
Toluene (ppm)	1	1	0	NA	0	2023	No	Discharge from petroleum factories
Trichloroethylene (ppb)	0	5	0	NA	0	2023	No	Discharge from metal degreasing sites and other factories

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
Vinyl Chloride (ppb)	0	2	0	NA	0	2023	No	Leaching from PVC piping; Discharge from plastics factories
Xylenes (ppm)	10	10	0	NA	0	2023	No	Discharge from petroleum factories; Discharge from chemical factories
cis-1,2-Dichloroethylene (ppb)	70	70	0	NA	0	2023	No	Discharge from industrial chemical factories
o-Dichlorobenzene (ppb)	600	600	0	NA	0	2023	No	Discharge from industrial chemical factories
p-Dichlorobenzene (ppb)	75	75	0	NA	0	2023	No	Discharge from industrial chemical factories
trans-1,2-Dichloroethylene (ppb)	100	100	0	NA	0	2023	No	Discharge from industrial chemical factories

Additional Contaminants

In an effort to insure the safest water possible the State has required us to monitor some contaminants not required by Federal regulations. Of those contaminants only the ones listed below were found in your water.

Contaminants	State MCL	Your Water	Violation	Explanation and Comment
E. Coli	0 present	0 present	No	
Total Coliform	0 present	0 present	No	

Unit Descriptions	
Term	Definition
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (µg/L)
ppt	ppt: parts per trillion, or nanograms per liter
NA	NA: not applicable
ND	ND: Not detected

Unit Descriptions	
NR	NR: Monitoring not required, but recommended.

Important Drinking Water Definitions	
Term	Definition
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
